

## ABOUT THE NEUROCOGNITIVE & BEHAVIORAL INSTITUTE

Established in 1998, The NeuroCognitive and Behavioral Institute is committed to its scientist-practitioner model. We are actively involved in neuroscience research integrating the latest scientific developments into clinical practice. Over the past three decades, NCBI has become one of the premiere centers in the nation offering clinical services on our virtual interactive clinical platform allowing us to provide assessment and treatment services via telehealth. We are among the country's leader in the accurate diagnosis and treatment of cognitive and related neurobehavioral and neuropsychiatric disorders. Our team consists of clinical neuropsychologists and cognitive neuroscientists, behavioral neurologists, clinical psychologists, psychiatric mental health nurse practitioners and physician assistants, cognitive and speech and language therapists as well as behaviorists (BCBAs), psychotherapists, neuromodulation and neurodiagnostic technicians.

We are licensed and credentialed in multiple states. For in-clinic procedures such as brain mapping and neuromodulation we have clinics in New Jersey and North Carolina.

We are in-network providers with most healthcare insurance including Medicaid, Medicare and commercial insurances.

Visit <https://neuroci.com/in-network-providers> to view the healthcare plans and states that we participate as in-network providers.

For additional information on these and other recently developed diagnostic tests and treatment interventions, please call The NeuroCognitive & Behavioral Institute and schedule a consultation.
